

An elevator that belongs to your architecture.

Custom glass, round and luxury home elevators

Your architectural vision sets the direction. Roys Rise brings custom elevator design and manufacturing expertise to the project team, with attention to form, glass, finishes and the details experienced at each floor.

Custom glass elevator shown in the Roys Rise project gallery.

Form, material and presence

Explore curved or flat glass, a sculptural focal point or an understated presence, and finishes that connect with the interior palette.

Homes and commercial spaces

Luxury residences, distinctive restaurants, showrooms and other commercial interiors each call for their own architectural response.

Begin with the design intent.

A shared project brief helps us understand what the elevator should contribute to the architecture and where our team can add the most value.

- 01 Architectural direction

The building's character, the elevator's visual role, preferred glass and finishes, and the details that matter to you. References, sketches or a material palette are welcome.
- 02 Project context

Location, residential or commercial use, current design stage, anticipated programme and the members of the project team. Share available plans through an agreed channel.
- 03 Design development

We discuss the elevator concept with your team and explore geometry, materials and details. Project-specific visualization can support a shared understanding of the proposed design.
- 04 Scope and coordination

We confirm the selected approach, building interfaces and delivery responsibilities for the project. Engineering, installation and service requirements are agreed for the location and scope.

Project locations

For California, Nevada, Arizona and Utah, we confirm delivery and installation scope for each location. For other US states and export markets, Roys Rise offers elevator supply without installation.
